

Have you seen this weed?

Seeds are "cupped" by two yellowish bracts.

Leafy Spurge is a perennial forb that flowers from May-September and reproduces from underground rhizomes and seeds. It is an aggressive noxious weed that spreads rapidly. The stem and leaves of this weed contain a milky latex that is toxic to cattle and horses. For these reasons, Clearwater County is asking landowners to call Environmental Services if this invader is found on your property. **Stop into our office or call us at 218-694-6183 for help!**

Spreading underground rhizomes result in dense patches.

Leafy Spurge blooms from May through September, and must be controlled before seeds mature.
